MOTION GRAPHICS ROTATION| Xanthe Pollard	x.pollard0120211@arts.ac.uk
	Here is the link to my motion graphics animation: https://www.youtube.com/watch?v=7lhJ4pSeg7A This assignment was to use Adobe After Effects to create an animation based on the concept: Connection. I decided to go with the idea of two people connect after a flight. I wanted to use very simple line work and make super clean transitions. However, I struggled massively with the program and ended up compromising on my original vision due to difficulty in many areas. Although, I don't particularly like the result of my efforts, I do believe my concept was really strong and if I were to repeat this animation in the future with more experience in the program, I could put up something more similar to what was in. my head. As of now, I know I need to focus on learning the program to create something much cleaner rather than focusing mainly on changing opacity and position of shapes. I would love to work more on masking techniques as well as trim paths.
